Trying to recreate figure 4a

Still in progress

I am attempting to recreate figure 4.

Steps thus far-

- Found the data
- Transferred data from excel to csv document
- Code is not available
- Made new project in rmarkdown
- Found some of the r packages used from the methods
- Had to change the name of rainfall column in excel to RW because of problematic characters in original name
- Made figure
- Having difficulty getting code to run without csv in global environment

8/25/2020

- Looked up how to make a bibtex file out of endnote
- Made a bibtex file for the paper
- Attempted to attach it into the rmd file- had some issues
- Began looking for new papers to start the next project once this one is finished- currently looking at Strassburg, B. B. N. et.al., 2020, Global priority areas for ecosystem restoration, Nature 1476-4687, 0028-0836
- {<https://www.ncbi.nlm.nih.gov/pubmed/33057198>}, recreate figure 3a
- Checking on availability of data and code

Code was not available

Still working on this project
